-----

As grids are essential for decarbonizing the power sector and the overall economy, all options to ease grid scarcity-- from quick fixes to more fundamental solutions -- are worth considering.

Grids currently receive too little attention from policy makers and face multiple development, such as regulatory uncertainty, social acceptance, financing gaps, fragmentation.

The International Energy Agency estimates global grid investment must double to more than EUR500 billion a year by 2030 to keep supplies stable. But experts warn capacity expansion alone ...

In recent years Albania has taken important steps towards diversifying the energy mix and achieving greater energy security, including by successfully launching a series of solar PV and wind auctions ...

The European Commission has proposed the first support package, of EUR 87.7 million, under the European Union's Growth Plan for the Western Balkans, to help implement EUR 487.3 ...

Data collected and prepared for a project of the World Bank Group Privatization of the Power Distribution System Operator (OSSH) Partial Risk Guarantee in Albania.

This initiative protects the integrity of Albania's electricity grid and improves its ability to respond to evolving operational challenges and integrate modern technologies.

Albania has not progressed with the implementation of Regulation (EU) 347/2013 and a deadline for adoption of the re-vised Regulation (EU) 2022/869 is end of 2024.

GENI is the highest priority objective of the World Game (R. Buckminster Fuller).

Significant increases in annual power load and new generation sources added to the Albanian grid have put a strain on the existing transmission system, leading to frequent interruptions in electricity supply ...
