The latest government data discusses U.S. solar energy capacity, efficiency, and available homeowner tax credits as well as renewable energy trends.

With renewables on track to meet more than a quarter of America's electricity in 2026, solar energy drives the growth. The U.S. Energy Information Administration is forecasting that the ...

Solar power continues to shine in the United States as more homeowners install rooftop systems than ever before. A survey by Aurora Solar found that 76% of homeowners consider home solar a...

Solar power includes solar farms as well as local distributed generation, mostly on rooftops and increasingly from community solar arrays. In 2024, utility-scale solar power generated 219.8 terawatt ...

Solar energy is the fastest growing and most affordable source of new electricity in America. As the cost of solar energy systems dropped significantly, more Americans and businesses ...

We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U.S. power grid in 2025 in our latest Preliminary Monthly Electric Generator Inventory ...

Climate Central's new report, A Decade of Growth in Solar and Wind Power, analyzed U.S. solar and wind energy data from 2014 to 2023 for all 50 states and the District of Columbia.

Solar photovoltaic (PV) systems will play a crucial role in meeting the United States' climate and energy goals. Their affordability, ease of installation, and versatility have made them the fastest ...

In a 2023 Pew Research Center survey, 7% of homeowners said ...

In a time of profound partisan division, it turns out there's something an overwhelming majority of Americans

**Americans
generation**

evaluate

solar

power

can get behind: more solar power.

In a 2023 Pew Research Center survey, 7% of homeowners said they have installed solar panels on their home; an additional 28% said they were seriously considering it. Westerners ...
