The focus of the energy policy is on rehabilitation of existing (hydropower) plants and distribution grids, as well as the development of new hydroelectric sites.

Energy in Burundi is a growing industry with tremendous potential. As of 2020, Burundi consumes a total of 382.70 million kilowatt hours (kWh) of electric energy per year.

Burundi has the lowest access rate in the East African Region despite the country's huge Renewable Energy potential (hydro, solar, wind). Their electricity sector is characterized by low investments ...

Burundi, a landlocked nation in East Africa, faces significant challenges in energy consumption and access. Despite having potential hydroelectric and petroleum resources, the country struggles with ...

Regionally, the East Africa Community (EAC) Tanzania, Rwanda, Uganda, Burundi, Kenya and South Sudan adopted their Regional E-waste Management Strategy in July 2017.

Energy in Burundi is a growing industry with tremendous potential. As of 2020, Burundi consumes a total of 382.70 million kilowatt hours (kWh) of electric energy per year. The country produces locally 69% of the electricity it consumes, with the rest imported from other countries. Its most important power source is hydroelectric power, representing 95% of total production. It also uses energy from other renewable (wind, solar, biomass, and geothermal) and coal power plants.

Only 10% of the population has access to electricity in Burundi, a low rate compared to other countries of the East African Community. The Energy Strategy and Action Plan provides a strong platform for ...

Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your ...

During our recent visit, we traveled for four hours from Bujumbura, the capital city of Burundi, to reach the

Burundi site energy

site of the Jiji and Mulembwe power plants in Matana, in Bururi Province. We ...

Households are the main consumers of energy in the country, accounting for 94% of total consumption. Their needs are almost exclusively met by traditional biomass (99%). Electricity (0.3%), and oil ...

primary energy supply. Energy trade includes all commodities in Chapter 27 of the armonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end
