Can *Bletilla*s be planted with other orchids?

To continue enjoying a natural and wild-style garden, you can plant *Bletilla* with other orchids: Lady's slipper (*Cypripedium calceolus*), *Calanthe*, *Pleione*, *Dactylorhiza*... These plants are quite rare in gardens, yet they all offer delicate and refined blooms! In the same spirit, you can pair *Bletilla*s with rare bulbs.

Is *Bletilla* a perennial?

The *Bletilla*s are terrestrial orchids native to Asia that offer decorative flowering in early summer. They are perennial plants with deciduous foliage. There are five species, but the most commonly cultivated is *Bletilla striata*. Among the other species sometimes cultivated are *Bletilla ochracea* and *Bletilla formosana* ...

What is a *Bletilla* orchid?

The *Bletilla* belongs to the orchid family: Orchidaceae. This is a large, highly diverse family that includes between 25,000 and 28,000 species. They are monocotyledonous and herbaceous plants that can grow on land or on the trunks of other plants (epiphytes). Orchids are appreciated for the complex and refined appearance of their flowers.

Where does *Bletilla* grow?

The *Bletilla striata* originates from China, Japan, and Tibet, where it mainly grows in mountainous areas. It can be found at the forest edge, in meadows, on rocky slopes, or near rivers. It was introduced to cultivation in Europe in the early 19th century. The *Bletilla* belongs to the orchid family: Orchidaceae.
