---

That expected growth is down from the record 37 gigawatts of solar power capacity that was added in 2024 and may dwindle further as some analysts believe that solar power may face ...

Renewable sources of electricity generation are continuing to grow strongly around the world, with global capacity expected to more than double by 2030, according to the IEA's latest ...

Despite the Trump administration's wide-ranging attacks on renewables like wind and solar power, the clean-energy industry is on pace for record growth this year, according to ...

While solar deployment and electric vehicle sales broke records in 2023 and 2024 in the U.S., significant obstacles to building a clean energy system remain.

In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, with 32.5 GW of new utility ...

Despite the Trump administration's wide-ranging attacks on ...

Since taking office, the Trump administration has paused permits on all new wind and solar projects on public land, onshore and offshore.

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity ...

"In our most recent monthly inventory of power plants, developers reported plans to bring 32 GW of solar capacity online in the next 12 months (October 2025 through September 2026)," EIA ...

Because energy supply facilities typically last several decades, technologies in these classes will dominate

# Can solar power generation projects still be done

solar-powered generation between now and 2050, and we do not attempt to look beyond ...

Federal agencies are delaying approvals for renewable energy projects on both federal land and private property at a time when electricity demand is going up.
