Will a new tax policy affect the lithium-ion battery market?

Another year of growth in the utility-scale storage market also marked a second consecutive year of record lows in the installed cost of lithium-ion batteries. However, trade actions and changes to tax policy have the potential to increase costs and dampen short-term growth.

How much does lithium ion battery storage cost?

The cost per kilowatt-hour (kWh) of lithium-ion battery storage was around \$1,200. Today, thanks to a huge push to develop cheaper and more powerful lithium-ion batteries for use in electric vehicles (EVs), that cost has dropped to between \$150 and \$200 per kWh, and by 2025 it had been predicted to fall to under \$100/kWh. The future

Are lithium-ion batteries the future of energy storage?

Challenges and future directions Lithium-ion batteries have become the dominant energy storage technology due to their high energy density, long cycle life, and suitability for a wide range of applications. However, several key challenges need to be addressed to further improve their performance, safety, and cost-effectiveness.
