For the first time ever, renewables generated more power than coal as solar and wind outpaced global demand growth in early 2025.

As traditional coal plants grow older, we're seeing a rapid increase in the use of renewable energy sources such as wind and solar power. This shift is not just about replacing old ...

According to a report by climate think tank Ember, wind and solar power together outpaced coal generation in the first half of 2025, driven largely by record solar expansion and steady...

In the first half of 2025, more electricity was generated from green sources than from coal. Solar and wind capacities are growing at a faster pace than global electricity demand, according to...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, ...

For the first time on record, renewable energy from solar and wind produced more electricity than coal in the first half of 2025. For the first time ever, renewable energy has overtaken ...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, according to a new ...

Renewable energy overtook coal as the world's leading source of electricity in the first half of this year - a historic first, according to new data from the global energy think tank Ember.

The US clean electricity transition continued as wind and solar generated more than coal for the first time. Electricity demand growth sped up and solar generation rose more quickly than gas ...

# Coal power photovoltaic power wind power

The world's wind and solar farms have generated more electricity than coal plants for the first time this year, marking a turning point for the global power system, according to research.
