How much solar power will Croatia have by 2030?

The Croatian government has set an ambitious target to reach 2.5 GW of installed solar capacity by 2030, a goal that would significantly contribute to the country's renewable energy mix. This target also aligns with the European Union's broader objective of increasing the share of renewables in electricity generation.

How will solar power impact Croatia's Economy?

The growth of solar power in Croatia is also set to create new economic opportunities. The renewable energy sector can generate jobs in manufacturing, installation, and maintenance of solar power systems, while increased use of solar power can lead to cost savings for consumers and businesses by reducing electricity bills.

How much energy will Croatia have in 2024?

The report also projects that total capacity could reach 1.5 GW by 2025 and 2.5 GW by 2030. Data from the Croatian Energy Regulatory Agency (HERA) confirms this trend, with installed capacity reaching 902 MW by the end of September 2024. This marks a substantial increase from the previous year, as 243 MW of new capacity was added in 2024 alone.

Why is Croatia's solar market growing so fast?

A key factor driving this growth is the government's commitment to a favorable investment climate, offering incentives like feed-in tariffs, tax breaks, and subsidies designed to attract more investors and developers to the Croatian solar market.

Croatia's solar market continues to grow steadily, led by the self-supply and commercial and industrial (C& I) segments, while regulatory barriers stall utility-scale development.

Croatia's solar market is expanding annually, with most growth driven by residential and industrial rooftop installations, according to the Renewable Energy Sources of Croatia Association ...

Despite the growth in solar energy capacity, Croatia still falls behind most European Union nations in photovoltaic electricity generation, covering only about 3% of its annual energy ...

Croatia's solar capacity is on course to exceed its wind energy capacity for the first time in early 2026. With

Croatia utility-scale solar

utility-scale projects facing regulatory deadlock and the end of net-metering for ...

With EUR80 million in EU-backed support, Croatia is enabling water and waste utilities to invest in solar energy and reduce reliance on electricity subsidies. Applications close at the end of ...

Croatia - funding boost for utility-scale renewables projects - pv Europe Posted on January 28, 2026 by Now.Solar

By the end of 2024, Croatia had reached 3.8 GW of installed renewable energy capacity, with solar energy doubling its figures in one year. By 2025, photovoltaic power is expected to exceed ...

According to the operator, households added 8,143 power plants, and entrepreneurs 1,678. Solar power capacity is on track to overtake hydropower by 2040 It means that the number of ...

Croatia's renewable energy sector is booming. Discover how new policies and investments are helping its solar capacity surpass 1 GW by 2025, with a target of 2.5 GW by 2030.

Croatia's solar market benefits from strong household adoption and public sector involvement, but unlocking the full potential of utility-scale projects requires overcoming regulatory ...
