As Cyprus continues to face an electricity shortage, authorities remain uncertain whether power cuts can be fully avoided in the coming days, with the grid running at full demand and reliant ...

This situation shows the vulnerability of Cyprus' energy infrastructure. Although renewables are playing an increasing role, dependence on conventional generation remains crucial.

Discover how a commercial battery energy storage system in Cyprus can reduce peak demand charges and boost your business's energy efficiency.

The Energy Grid Operator was forced to yet again move with controlled electricity cuts today, as massive consumer demand due to the protracted heatwave, jammed up the system.

We supported, along with DG REFORM (ex SRSS) and DG ENER, the Cyprus government to establish a comprehensive medium- to long-term policy (2030 time horizon) for the optimum penetration of ...

With a high share of solar energy concentrated during the daytime, the modelling results indicate that the system would benefit from a more flexible operation of the CCGT units. Operating in the future ...

Thousands of megawatt-hours of power generated by renewables get discarded each day because Cyprus lacks the storage systems, MPs heard on Tuesday.

In a statement, the TSOC said electricity supply is expected to be stretched to its limits between 6:30 p.m. and 10:00 p.m. on Wednesday and Thursday. If necessary, controlled load ...

Cyprus faces early concerns over electricity supply adequacy as the gap between power generation and consumption narrowed to dangerous levels yesterday, raising fears of potential ...
