View an interactive map or download geospatial data on land-based and offshore wind supply curves.

The United States Wind Turbine Database (USWTDB) provides the locations of land-based and offshore wind turbines in the United States, corresponding wind project information, and turbine technical ...

The map combines three open energy datasets and allows visitors to explore global power plants and U.S. solar and wind energy projects using text search and map visualization tools.

Data and information about power plants and their location across the globe, plotted on an Interactive world map

Wind turbine map, always up-to-date with more than 300k turbines worldwide. Open-street-map (OSM) provided info boxes with turbine type, manufacturer, rated power, hub height, rotor diameter and ...

An interactive global map that provides wind speeds and allows for the specification of location and the layering of additional metrics.

Providing the estimated wind power density at 50 meters above the ground, these maps are suitable for distributed wind energy, which powers nearby users, such as communities looking to lower utilities ...

The Global Wind Power Tracker (GWPT) is a worldwide dataset of utility-scale, on and offshore wind facilities. It includes wind farm phases with capacities of 10 megawatts (MW) or more.

The Global Wind Atlas is a free, web-based application developed to help policymakers, planners, and investors identify high-wind areas for wind power generation virtually anywhere in the world, and then ...
