Will I still have an electric bill after going solar?

You will probably still have an electric utility bill after going solar. Most homeowners need power from the grid at night and when their panels aren't producing enough electricity. The average monthly residential electric bill is \$136.84 for 855 kilowatt hours, according to the Department of Energy

Should I pay for solar panels instead of an electricity bill?

There are several advantages of paying for your solar equipment instead of an electricity bill. At the end of the day, home solar gives you control over where your electricity comes from and how you pay for it - which is something you won't get from a utility company. How much will my electric bill be with solar panels?

Can solar panels reduce your electric bill?

In theory, you could eliminate the "electricity" portion of your electric bill: Your solar panels operate at maximum efficiency. Your home uses less electricity in the daytime than your solar panels generate. Any excess generation is stored in solar batteries and/or sent back to the utility grid with net metering.

How much will my electric bill be after installing solar panels?

The size of your electric bill after installing solar panels depends on your specific situation. Every state has its own regulations, utilities offer different rates and options, and each home is unique.
