What types of glass roof systems are available for commercial buildings?

Multiple glass roof systems and rooflight configurations are available for commercial buildings such as offices, warehouses, schools, and transport facilities. They range from scalable prefabricated Modular Skylights to bespoke stick systems that close a building envelope and offer design flexibility.

What is a commercial glass roof system?

VELUX Commercial glass roof systems can be used to create attractive rooflights in an array of shapes and sizes. Options range from prefabricated modular skylights through to fully bespoke structural glazing that can be configured to meet the most demanding design requirements.

What is a VELUX commercial glass roof system?

A VELUX Commercial glass roof system is a daylight solution available in a variety of design configurations and can meet specifications of any commercial building project. Suitable for both flat and sloped roofs, glass roof systems can be installed to optimize the amount of daylight that enters a space.

Can a glass roof be installed on a flat roof?

Suitable for both flat and sloped roofs, glass roof systems can be installed to optimize the amount of daylight that enters a space. Double or triple glazing panels are available as part of a new-build or refurbishment project and glass roofs for extensions are possible.
