What is Vietnam's energy sector like in 2021?

Vietnam's energy sector has become one of Southeast Asia's most vibrant in recent times. Since the adoption of feed-in-tariffs (FiTs) in 2017, the national electricity system's installed capacity rose from 47GW to 78GW in 2021, 68% of which are contributed by variable renewable energy growth.

Are solar panels with storage batteries a good idea?

Overall, as mentioned above, installing solar panels with storage batteries can have a positive impact on both individuals and society as a whole by increasing energy independence, reducing GHG emissions, improving energy access, and increasing grid stability.

What is the storage capacity of a PV-battery system?

At the time of research, most of the papers studied PV-battery systems with storage capacities of 0.5-1 kWh times the installed PV capacity in kW, due to the high cost of such systems, meaning that batteries were used for short-term storage, normally less than one day.

Can batteries help promote self-consumption solar rooftops?

As the grid cannot handle more variable capacity in the short-term, energy storage by batteries is one of the most feasible solutions to promote self-consumption solar rooftops in industry.
