How do I Reset my solar inverter?

To reset most solar inverter faults, turn off the AC isolator near your main panel, then turn off the DC isolator next to the inverter or array. Wait at least 60 seconds, then turn the DC isolator back on, followed by the AC isolator. Check the inverter display or app to confirm the fault cleared.

What should I do if my solar inverter doesn't work?

If the reset doesn't work or the inverter fails again shortly after rebooting, you may need to take further action. Consider the following solar inverter repair options: Check the inverter display panel: Look for fault codes and consult the user manual. Inspect wiring and fuses: Loose or corroded wires can disrupt connectivity.

How do you disconnect a solar inverter?

Take a deep breath. Relax. Wait for around 30 to 60 seconds. Alright, you've waited enough. Now turn your Electrical Service Panel back on. Next, switch on the DC Disconnect or Solar Disconnect Box. Now turn on the AC disconnect located at your solar inverter. Time for the grand finale.

What does a solar inverter fault code mean?

Inverter fault codes: These codes, made up of numbers or letters, can indicate what's wrong. All of these signs may indicate the need to check your system and figure out how to reset the inverter fault or call for service. A solar inverter fault doesn't always mean your system is damaged.
