The DC voltage input range is 200-400V (lower than 200V will trip low voltage alarm and stop, above 400V will automatically suppress the voltage rise to avoid overvoltage trip and stop)

Outdoor Liquid cooling Power Module for string battery or paralleled on both AC& DC PWS1-450M-H-L

The AP1500-DA250-U3116 is an heavy duty industrial DC/AC inverter that converts a DC voltage from 400V to 230V AC voltage and can supply an AC current of 6.5A.

Our 800-Volt Silicon Carbide Inverter for Electrified Vehicles uses an innovative, double-side cooled silicon carbide (SiC) based power switch that delivers the higher power densities and efficiencies ...

IV3 inverter is developed using proven IGBT Power Module technologies and is scalable up to 170kW. It is a very flexible 400V solution where core structure can be shaped to adapt to ...

These devices convert direct current (DC) power into alternating current (AC) power at a standard voltage level of 400V, making them ideal for industrial, commercial, and large-scale residential solar ...

The high input voltage DC-AC sine wave inverters are designed for industrial applications that require clean sine wave AC-output voltage. They are suitable for operation in industrial automation and ...

Bravo ECI - 400/230 is a compact modular inverter that converts a 400 Vdc power source into 230 Vac. By using at least three modules, we can offer solutions for three-phase infrastructures (3x400Vac + ...

The 400V inverter is the brain at the heart of the electric powertrain, it controls the electric motor. It converts Direct Current (DC) from the battery to Alternative Current (AC) to power the ...

Board mount DC DC converters are compact switching modules (switching regulators) soldered or mounted directly onto a printed circuit board that convert one DC voltage to another (higher, lower, or ...
