Wind and solar generated more electricity across the European Union than fossil fuels for the first time last year, according to Ember's newly released European Electricity Review. Wind and...

New data from energy think tank Ember shows that solar accounted for 22.1 per cent of the EU's electricity mix in June 2025, narrowly overtaking nuclear - and, notably, far outpacing fossil...

Solar energy was the main source of electricity in the European Union for the first time in history in June, according to new figures.

In a historic milestone for clean energy, solar power became the leading source of electricity in the EU for the first time in June 2025. New data from energy think tank Ember reveals ...

Solar energy has become one of Europe's fastest-growing and most promising sources of renewable power. One of their contributors, solar photovoltaic (PV) systems, now supplies 10% of ...

For the first time, solar was the largest source of electricity in the EU last month, supplying a record 22 percent of the bloc's power. At least 13 countries saw solar output hit a new monthly high ...

Under the European Green Deal and the REPowerEU plan, solar power is a building block of the EU's transition to cleaner energy. Its accelerated deployment contributes to reducing the EU's ...

With the additional push caused by the global energy crisis, EU solar capacity has doubled between 2021 and 2024 alone. The solar market is now set to exceed EU countries' 2030 ...

Solar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). Solar power is growing in every EU country.

We'll answer the most common questions: how solar works, what it costs, how it performs in all conditions,

Is Europe using solar power

and how it contributes to climate goals, sustainability, safety, and local communities.
