The Philippine Department of Science and Technology (DOST) in Siquijor successfully installed a hybrid solar power system for the Bosong-bosong Water Services Association (BWSLA) ...

Now, an initiative driven by local people is looking to build a microgrid that runs off solar and tidal power. This could help the island cope with hours of outages and move islanders away from ...

There is a huge potential for renewable energy applications on islands. Due to the traditionally very high electricity prices for island off-takers and because of international support schemes renewable ...

Life on an island with no connection to a power grid is becoming more feasible thanks to a steep decline in the cost of solar panels over the past 20 years.

An island microgrid is a self-contained power system that can operate independently from the main grid. It typically includes solar panels, wind turbines, energy storage systems (such as ...

Although a survey of 36 small island economies found that the majority now generated less than 10% of their electricity from renewable sources, encouraging trends are emerging.

The world's most remote solar photovoltaic plant is supplying clean energy to the inhabitants of Easter Island.

The isolated island has been running on intermittent solar power since 19 April due to the failure of its ageing diesel generator.

In Adjuntas, Puerto Rico, 1 000 solar panels are set to power 17 small businesses as part of a battery-supported community microgrid, bolstering the local economy and standing ready to ...

Life has not been the same for Haida Doroteo, 53, since the small island she calls home in Western Visayas in the Philippines started to get electricity around the clock from a hybrid solar ...
