Climate groups commend China's rapid expansion of solar, wind, and EVs, but there are major human rights and sustainability concerns linked to Chinese production of solar panels, ...

Climate groups like Ember, Transition Zero and the Center for Research on Clean Air are quick to praise China's rapid expansion of solar, wind and EVs. Ember even put out a report arguing...

In 2022, China's new installed PV capacity exceeded 87.4 GW, an increase of 59.3% year-on-year. New solar installations reached a new record high, becoming the largest and fastest ...

To reach net zero, Japan will need to rapidly expand renewables, but its solar manufacturing capacity is virtually non-existent despite it being a pioneer of the technology.

Japan is a leader in solar PV innovation and is now looking to grow its industry further amid US-China tensions and a shift to renewables. The country has been investing in floating solar ...

China's solar and wind power generation has also seen significant growth. By 2023, solar and wind power will account for 50% of China's domestic installed capacity, surpassing the ...

By scaling up production, China was able to reduce solar power generation costs by 80% in the 2010s, making solar an inexpensive energy source. Meanwhile, China's low-price offensive...

Japan has launched an investigation into Chinese-made solar panels over fears they may contain hidden communication devices capable of disrupting the nation's power grid - a security...

Japan is betting \$1.5bn on a breakthrough in next-generation ultra-thin, light and bendy solar panels, subsidising the commercialisation of a technology that analysts say could disrupt...

## Japanese media praises China s solar power generation

In recent weeks, Japan has witnessed an intensifying debate over Chinese-made solar power equipment, fueled by growing concerns about its potential to be controlled remotely by malign ...
