As car dealerships add electric vehicle charging, solar microgrids can help cut utility bills by up to 90%. Charging infrastructure developers can take advantage of the energy...

Explore the leading trends, challenges, and opportunities shaping microgrids in 2025. Discover how energy leaders can drive innovation and market growth.

U.S. microgrid capacity could hit 10 GW by the end of 2025, according to the Department of Energy (DOE).

One of these solutions is microgrids that can disconnect from the grid and offer grid resilience during an outage. While this technology is still finding its footing in the industry, states ...

By 2035, microgrids are envisioned to be essential building blocks of the future electricity delivery system to support resilience, decarbonization, and affordability.

The report discusses three trends in grid modernization actions taken in Q2 2025: (1) states mandating procurement of energy storage, (2) lawmakers implementing rules governing ...

SEPA Microgrids Industry Update: RE+ Microgrids 2025. This briefing summarizes insights from that workshop on advancing microgrid deployment across the United States.

The 50 States of Grid Modernization quarterly report from NC Clean Energy Technology Center identified policy trends related to grid modernization across the 2025 legislative session.

A new report by Think Microgrid says most states are doing an insufficient job at deploying microgrids despite developing microgrid roadmaps.

Although State Energy Offices and PUCs have different electric distribution system roles, each is interested in ensuring the safe, reliable, affordable, and beneficial deployment of resilience projects, ...
