Zealand's energy security over the short, medium, and long term. This white paper presents the key findings of that analysis, including considering a long list of solutions for flex.

EECA has supported the release of a new Publicly Available Specification (PAS) that gives Kiwi homeowners a clear, practical guide to choosing and using solar energy and battery storage at home.

Both solar PV and energy storage have seen increasing support from the Electricity Authority. Indeed, the organisation is actively looking to improve regulations to support more investment in...

As the uptake of solar power accelerates, New Zealand should develop policy that requires recycling of panels and supports installations on rental properties.

As solar technology advances and battery storage becomes more affordable, more New Zealanders are considering solar PV as part of their energy solution. A solar PV system can operate on its own, supplying ...

SEANZ supports these positive steps to remove barriers and establish the conditions for more New Zealand households to install distributed solar and battery storage.

Best practice guidance to help homeowners choose, install, and maximise solar PV and battery storage for savings, reliability, and sustainability.

Soft lithium-ion technology will provide 100 MW power and 200 MWh storage capacity to support grid stability as intermittent wind and solar power increases in New Zealand

New Zealand's unique geography and climate make it perfect for solar energy. But here's the catch - sunlight isn't available 24/7. That's where photovoltaic power storage systems come in. These systems store excess ...

New Zealand s solar energy storage policy

Battery energy storage systems (BESSs) are the most common new form of ESSs in New Zealand. The Authority is expecting a significant increase in the amount of BESSs connecting to New Zealand's power ...
