It also includes non-energy uses of energy products, such as fossil fuels used to make chemicals. Some of the energy found in primary sources is lost when converting them to useable final products, especially electricity.

The data and information that are available in the ERC were mostly provided by the government ministries, agencies, and departments, that have responsibility for statistics and planning, in general, and the energy ...

In the region of Paramaribo, electric power is supplied by means of: 180MW of hydroelectric power, supplying about 75% of the energy, and 66MW of diesel generation [5].

The second case addresses the impacts of climate change on electricity demand in the Paramaribo area. In this case, the correlation between cooling degree days and energy demand was examined.

In the region of Paramaribo, electric power is supplied by means of: 180MW of hydroelectric power, supplying about 75% of the energy, and 66MW of diesel generation .

Policy and regulatory changes: Policies promoting renewable energy and energy conservation through demand-side management can impact electricity consumption patterns.

IntroductionEnergy SituationRenewable EnergyFossil FuelsKey Problems of The Energy SectorPolicy Framework, Laws and RegulationsFurther InformationThe main problems and challenges that face Suriname's energy sector are listed as follows: 1. Regulatory policies are weak, as clear policies are lacking, which makes it difficult to formulate goals and plans. 2. Net-metering is not implemented. 3. Feed-in tariff schemes cannot be deployed. 4. Renewable portfolio standards are missing. 5. Energy ef...See more on energypedia Population (%): 97Year: 2000eas.sr[PDF]Electricity Sector Plan - eas.srPolicy and regulatory changes: Policies promoting renewable energy and energy conservation through demand-side management can impact electricity consumption patterns.

Electric power consumption (kWh per capita) - Suriname from The World Bank: Data

Paramaribo electricity consumption

Reducing energy use in your home saves you money, increases our energy security, and reduces the pollution that is emitted from non-renewable sources of energy.

The Development of Renewable Energy, Energy Efficiency, and Electrification of Suriname program is being followed to promote renewable energy integration. Solar power will likely become an essential energy source

...

As of 2020, 52.9% of Suriname's electricity was generated from fossil fuels, 46.7% from hydro power, and 0.4% from solar energy. Suriname aims to keep its share of electricity from renewable sources above 35% by
