**Project Content:** The fishing and light complementary photovoltaic power station uses the vast area of the fish pond to install solar panels on it to generate electricity.

This project is currently the largest photovoltaic power generation project with flexible brackets in China, which was completed on May 28th, 2020 and officially put into operation.

The main function of the fishing light complementary photovoltaic bracket is to erect the supporting structure of photovoltaic panels above the water surface of the fish pond.

The figure shows an aerial view of a fishing light complementary photovoltaic power generation project.

As coastal cities face increasing energy demands, a surprising solution has emerged from combining photovoltaic (PV) bracket technology with marine lighting systems.

These applications fully combine the characteristics of photovoltaic power generation with activities such as fishery and ocean observation, and use solar power to power related equipment to improve ...

Picture this: A fishing village where solar panels float above fish ponds like high-tech lily pads, generating clean energy while shrimp thrive in the shaded waters below.

It has now become an international enterprise integrating R& D, production, and sales of photovoltaic brackets, various metal frames and the EPC full industry chain, serving the global clean energy ...

Galvanized Aluminum Fish Farm Fishing Light Solar Mounting System for Solar Project Water Based Photovoltaic Mounting Structure| Alibaba

Workers install photovoltaic (PV) panels on pillars of a fishing-light complementary PV power station in Dunshang town, East China's Jiangsu Province on October 22, 2023.
