---

In order to achieve the effective use of resources and the maximum conversion rate of photovoltaic energy, this project designs a fixed adjustable photovoltaic bracket ...

Double-pole Photovoltaic Bracket: Due to the load being shared by two poles, the double-pole photovoltaic bracket has a stronger load-bearing capacity. It can support larger-scale ...

Fixed bracket is presently one of the most widely used brackets in photovoltaic projects. It is subdivided into mountain, flat land, water surface, double column, single column, large span and inclination land ...

According to the different materials used in the main force-bearing rod of the PV bracket, it can be divided into aluminium alloy bracket, steel bracket and non-metallic bracket ...

Our comparison diagrams settle the debate: Aluminum brackets are 65% lighter but cost 40% more. Steel's heavier but cheaper - choose like you're picking between a pickup truck and sports car.

Herringbone bracket follow the structural mechanics of the "three rhombus rule", that is: three reinforcement is not in a straight line, three single hinges two by two connected to an invariant ...

A PV bracket is a support structure that arranges and fixes the spacing of PV modules in a certain orientation and angle according to the specific geographic location, ...

Fixed photovoltaic brackets do not rotate with the changing angle of solar incidence but receive solar radiation in a fixed manner. They are categorized based on the set tilt angle into: ...

The invention relates to the technical field of photovoltaics, in particular to a double-sided solar photovoltaic module bracket device and a use method thereof.

## Photovoltaic fixed bracket has double sides

This kind of bracket can reduce the amount of land construction and is suitable for areas with complicated terrain. Double-column bracket adopts the form of front and rear columns.
