Does red-dot-rack offer rooftop solar mounting systems?

Red-Dot-Rack offers rooftop solar mounting systems to allow for the installation of solar on almost any type of roof surface. These systems cover applications for both flat and raised installation on pitched metal roofs and for flat concrete slabs.

What is a solar mounting system?

Modern solar mounting systems consist of roof attachments (with or without flashing), mounting rails, and module clamps. These products are designed to allow workers to quickly and effectively install solar panels that will last for decades on the roof, with minimal effect on the roofing materials and no roof leaks.

What is a rail-ready solar mounting system?

Companies like SnapNrack have pioneered rail-ready mounting solutions that come pre-assembled, significantly reducing installation time and complexity. Ballasted mounting systems use concrete blocks or other weights to secure solar installations without roof penetrations.

What tools do I need to install red-dot-Rack solar panels?

The Red-Dot-Rack product range is designed for mounting solar modules onto flat or pitched steel rooftops, tile rooftops, and concrete slab rooftops. You will need a cordless drill and a grinder with a stone disk (for tile roof installation only) for installing the Red-Dot-Rack rooftop solar mounting systems.

Spider-Rax is a company founded by solar installers, producing the industry's most innovative mounting systems. Designed to reduce material cost and labor, it requires no cutting, ...
