Greece's renewable energy sector is experiencing a rapid development. In the last five years, the share of renewables in the country's electricity mix grew by more than 15 percentage ...

Overall, the installation suited the cooling needs in sunny Greece, offering clear savings and comfort while highlighting the value of balanced solar sizing and smart controls.

One of the most innovative applications of solar energy is the solar air conditioning systems because the mean ambient temperature in the summer is high in Greece. In this study the...

The session brought together a diverse panel of experts and stakeholders who shared strategies, policy insights, and innovative technologies to tackle the unique challenges of ...

In this dissertation, a solar thermal heating and cooling system, at a residential building is studied through its design, installation, modelling and evaluation. The solar thermal heating and cooling ...

Sole installed first the largest worldwide solar air conditioning system in a Greek industry in 1999. Through the years SOLE has installed this system in hotels, super markets and public buildings in ...

Greece's renewable energy sector is experiencing a rapid development. In the last five years, the share of renewables in the country's ...

The use of solar energy (SE) to drive cooling cycles for space conditioning of most buildings is an attractive concept, especially in southern European countries, since the cooling load ...

The implementation of photovoltaic air conditioning in Europe is a future trend. Greece is also building agricultural photovoltaic power plants throughout the country, the relevant sites to meet the needs of ...

Solar air conditioning production in Greece

Solar thermal cooling systems (SAC) offer a promising solution to high summer electricity demand in Southern Europe. The paper presents existing SAC installations in Greece and Cyprus, highlighting ...

Solar power in Greece has been driven by a combination of government incentives and equipment cost reductions. The installation boom started in the late 2000s with feed-in tariffs has evolved into a market featuring auctions, power purchase agreements, and self-generation. The country's relatively high level of solar insolation is an advantage boosting the effectiveness of solar panels; within Europe, Greece re...
