What do the lights on my SolarEdge inverter mean? The multicolored lights on the SolarEdge inverter tell us different information about the production and communications on your array.

Many different alerts can appear on your SolarEdge Inverter. For a full comprehensive list on SolarEdge error codes and their suggested immediate response, follow the guide below:

These codes are your inverter's way of flagging issues--sometimes as simple as grid voltage fluctuations, other times signaling more serious faults that require attention.

? Yellow (Nighttime) - Normal standby mode. At night, when there's no sunlight, the inverter rests in standby.
? Red - Critical error. Try restarting the inverter. If the red light...

This warning indicates that your home is demanding more power than the inverter can safely supply, which can trigger automatic shutdown to protect the inverter from damage.

Your inverter has a switch and three colored LEDs that indicate system information, such as errors or performance. The following tables detail the possible LED and switch combinations, and what they ...

Solid red light means lost connection to WiFi, solid yellow means never connected. Please contact SunPeople for a guide on how to reconnect your inverter to WiFi.

All SolarEdge inverters include a set of colored LED lights that show the current system status.

This document provides a concise guide for understanding the status lights on your SolarEdge inverter. Monitoring these lights helps ensure your solar energy system is functioning ...

Check that the DC input power voltage is within the specified operational range. If the inverter is switched on initially, the Greenlight goes off, and the Red light comes on, but the cooling ...
