Solar installations like Ivanpah have added to this toll, with hundreds of thousands of birds killed over the past decade. Despite billions in subsidies, many green energy projects remain ...

To this end, Katzner, Davis, and other biologists are working with the renewable energy industry to create a nationwide repository of dead birds and bats killed at wind and solar facilities.

UF researchers analyzed data obtained from feathers of 871 birds found dead at solar and wind energy facilities in California.

Solar energy production in the United States causes an estimated 37,800 to 138,600 bird deaths annually, a figure significantly lower than the 14.5 million deaths attributed to fossil fuel power ...

Solar farms can impact bird populations through several mechanisms, leading to fatalities or displacement. The "lake effect" occurs when reflective photovoltaic (PV) panels are mistaken for ...

As a result of the investigation, the Fish and Wildlife Service estimated that the number of birds killed by the Ivanpah Solar Power Plant is "6,000 birds per year."

A rare and unusual type of solar power plant that concentrates sunlight in California is accidentally killing up to 6,000 birds every year, with staff reporting that the birds keep flying into its ...

Solar farms, coming soon to a field near you, are an ecological disaster turning productive land into a nature dead zone. Birds frequently fly into the panels mistaking them for water, while ...

Vander Zanden and colleagues performed geospatial analyses of stable hydrogen isotope data obtained from feathers of 871 individual birds found dead at solar and wind energy facilities in...
