What is the economics of solar power generation?

The chapter provides an overview about the economics of solar power generation. Content may be subject to copyright. economies' annual energy demand. Despite this abundance of solar energy, the of today's global energy supply. Yet, the share of solar energy in global energy supply, especially in the electricity sector, is rising rapidly.

How much does solar power cost?

As mentioned in Section 1,solar power has been supplied at very low prices (< US\$20/MWh) through auctioning in many countries in the past few years. Our analysis,however,does not find LCOEs below \$20/MW unless the discount rate is 6% or lower,the capacity factor is very high (30%),and economic life is very optimistic (30 years).

Does a globalized solar photovoltaic module supply chain save money?

Modelling shows that a globalized solar photovoltaic module supply chain has resulted in photovoltaic installation cost savings of billions of dollars.

How much does a solar PV system cost?

The study distinguishes between small rooftop PV systems (<30 kW),large rooftop PV systems (>30 kW),ground-mounted PV systems (>1 MW),and Agri-PV (500 kW - 2 MW). The specific system costs currently range between 700 and 2000 EUR/kWpand have mostly increased,particularly for small systems. 22.5 EURcents/kWh.

Modelling shows that a globalized solar photovoltaic module supply chain has resulted in photovoltaic installation cost savings of billions of dollars.
