Which energy technologies are less expensive than wind and solar?

Along with wind and solar, the study considered gas, coal, biomass, and nuclear generating technologies, which were all less expensive than wind and solar on a complete system basis. One of the reasons for these high full system costs is that the grid needs back-up power when the wind does not blow and the sun does not shine.

What is wind energy?

Wind energy or wind power is energy captured from moving air to generate electricity. The wind has kinetic energy in it. The kinetic energy is converted into mechanical energy using a turbine. The mechanical energy can be utilized for numerous purposes including pumping water and grinding grain.
