---

Even with some waivers for humanitarian programs, it was difficult to bring in resources and materials to fix Syria's critical infrastructure -- especially electricity -- further compounding the woes of the vast ...

European regions experiencing increased extreme weather events have recognised the value of solar-powered emergency communication networks. Many municipalities now incorporate ...

Looking past the immediate crisis, Syria's energy storage needs could actually drive innovation. Imagine if every cell tower became a neighborhood power hub during outages.

Under the Assad regime, U.S. sanctions not only crippled Syria's economy but made even basic repairs nearly impossible. Spare parts, fuel imports, and financial transactions were all blocked or delayed.

Syria's new approach is seen as a potential turning point in the country's long recovery, not only from war but from the chronic power shortages that have paralyzed the economy and daily life.

With the lifting of US sanctions, Syria is turning towards solar power as a potential solution to its long-standing energy crisis. The country has faced significant challenges in securing state ...

Syria has not had more than four hours of state electricity per day for years, as a result of the nearly 14-year civil war that ended with the ouster of former President Bashar Assad in December....

Energy Management System (EMS): The EMS is the brain of the operation. It monitors energy flows, decides when to store or release energy, and ensures optimal performance of the ...

This is the first study to describe an implementation of solar-powered electric health vehicles in Syria and offers necessary insights onto the potential successes of such an initiative.
