This paper reviews the transformative shifts within China's photovoltaic (PV) industry against the backdrop of a global pivot from fossil fuels to renewable energies, a transition ...

China eliminates solar export tax rebates effective April 1, 2026. Module prices forecast to rise 10-15%. Get the complete analysis and pricing outlook.

Consolidation in China's crowded solar power sector is pushing smaller players out of the market, but excess production capacity - with more on the way - threatens to keep global prices low ...

China's rapid rise as a solar powerhouse fuels global growth but exposes deep cracks -- overcapacity, trade tensions and the limits of state-driven industrial policy, says EAI deputy director ...

With the rise of competing renewable energy sources, solar photovoltaics have experienced a loss of market share. Finally, tightening environmental regulations have created ...

Despite frequent claims that China's rise in global solar photovoltaic (PV) industries was the realization of strategic central government industrial policy, the development of China's solar PV sectors initially ...

For Chinese solar photovoltaic (PV) manufacturers, things are going from bad to worse. Recently published third quarter reports showed that many of the largest players are posting ...

This post explores China's rapid rise to dominance in the global solar manufacturing industry, highlighting the strategic maneuvers and government policies that have enabled this ascent ...

Losses in China's slumping solar sector narrowed in the third quarter, according to data presented by an industry group official, as the government's war on industrial overcapacity targeted...

Why did the photovoltaic industry not rise when the ChiNext rose

In this paper, we employed a revised Lotka-Volterra model to study the evolution of wind and photovoltaic solar technologies, as well as the relationship between these two ...
