What is a drawable circuit breaker?

Withdrawable circuit breakers are designed to make and break all currents within their designed ratings from very small load currents right up to full short circuit and full earth fault currents. However,they are not generally designed for frequent operation. When frequent switching of an HV circuit is required,a Contactor is often used.

What is the difference between a contactor and a drawable circuit breaker?

When frequent switching of an HV circuit is required, a Contactor is often used. Circuit breakers do not require a power supply to be available to maintain their selected open or closed position. For this reason, they are often termed as latched devices. Withdrawable circuit breakers comprise two contacts, the fixed contact, and the moving contact.
